

Homeschooling Information

General Facts and Trends

Homeschooling is a growing trend with about 15 percent to 20 percent growth per year. There are over 2 million homeschooled (parent-led, home-based education) children in the United States alone.¹ In addition to the United States, home-based education is growing in other countries, including:

- Australia
- Canada
- Hungary
- Japan
- Kenya
- United Kingdom²

In the United States, families pay the cost of homeschooling and are not dependent on public, tax-funded resources for their children's education. Homeschooling saves taxpayers more than \$16 billion in public school funding.²

Homeschooling is growing in popularity among families of various income levels; parents of various education levels; families of various faiths, including atheists and Christians; and families of various political affiliations, including conservatives, libertarians, and liberals. In addition, about 15 percent of homeschool families are not Caucasian and not Hispanic.²

Homeschool Academic Achievement Facts

The average homeschooled student scores between 15 and 30 percentile points higher than their public school peers on standardized academic achievement tests. Homeschooled students score higher on achievement tests regardless of:

- Their parents' level of formal education
- Their family's household income
- Their parents' teacher certification³

Homeschooled students score above average on the SATs and ACTs and are actively recruited by many colleges.³

Social, Emotional, and Psychological Development

The homeschooled are performing typically above average on measures of social, emotional, and psychological development. Research measures include peer interaction, self-concept, leadership skills, family cohesion, participation in community service, and self-esteem.²

Homeschooled students are regularly engaged in social and educational activities outside their homes and with people other than their family members. They are commonly involved in activities such as field trips, Scouting, 4-H, political drives, church ministry, sports teams, and community volunteer work.²

Homeschooling Accommodates Gender Differences in Youth

Researcher Susannah Sheffer found that homeschooling gives young people an opportunity to ask questions such as “Who am I?” and “What do I really want?” Through this questioning process, home-educated girls develop strengths and resistance abilities that give them an unusually strong sense of self.⁴

Homeschooling Facts About Adult Success

Adults who were homeschooled as children generally:

- Participate in local community service more often than the average person
- Vote and attend public meetings more often than their peers
- Attend and are successful in college at an equal or higher rate than the general population
